Flutter · Android & iOS

Who owes you, and who you owe. One notebook.

A people-first personal finance app I built for Arabic-speaking users: offline-first, bilingual and private by design.

THE PROBLEM

In Egypt, a lot of money moves between **people**, not categories.

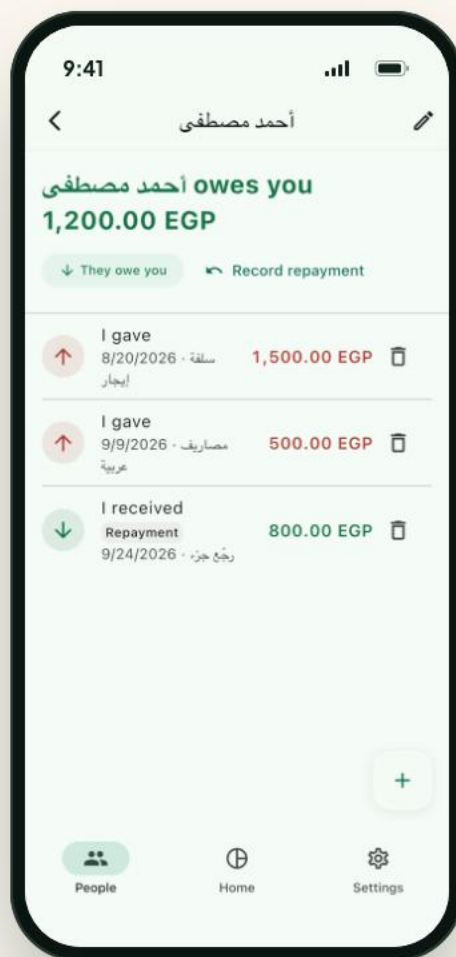

A loan to a friend. Rent a cousin covered. A wedding gift you'll return one day. Most of it lives in people's heads or in a paper *daftar*, and expense trackers don't help because they're built around categories.

A balance per person

"They owe you", "you owe them" or "settled", with partial repayments rolled in.

Built for non-accountants

Plain language, calm visuals, no ledger jargon.

Daftary

WHAT'S INSIDE

People first. Then the rest of your money.

People & balances

Two-way running balances and full history

Occasions

Weddings and births: who gave and received what

Budgets

Planned vs. actual, with a monthly trend

Savings goals

Projected dates and a "what if" calculator

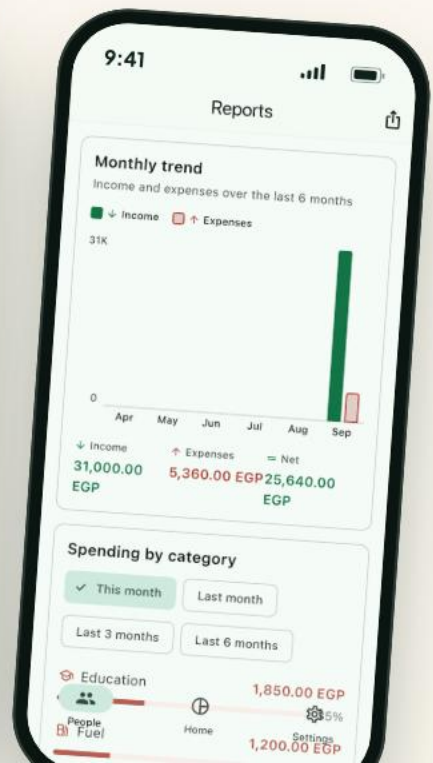

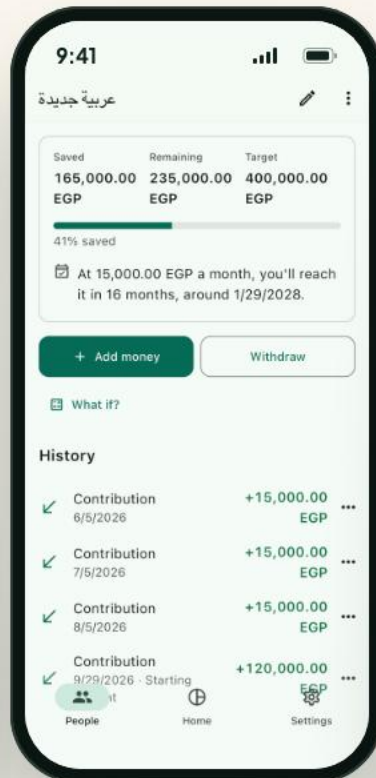

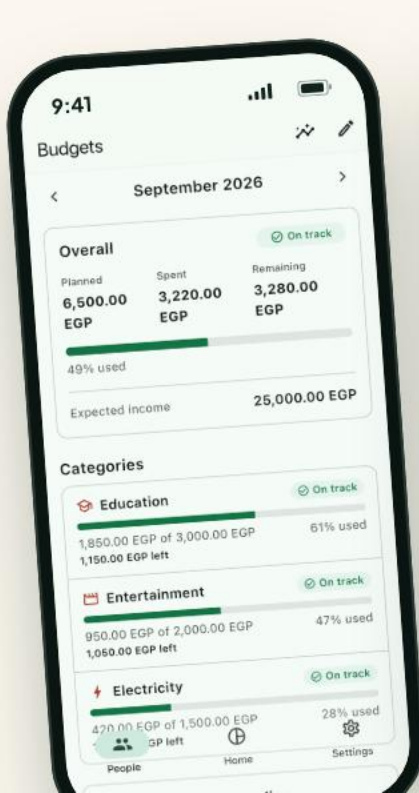

Scan paper

On-device OCR turns old notebooks into entries

AI assistant

Optional, with your own API key and no backend

ARABIC-FIRST

Real right-to-left. Not a mirrored translation.

Full RTL layouts, Arabic-Indic digit input, light and dark themes, and an optional Liquid Glass UI, all from one Material 3 design system.

العربية

English

Light / Dark

Multi-currency

Clean Architecture, split by feature.

18 feature modules, each with its own data, domain and presentation layers. Shared infrastructure lives in `lib/core`.

Presentation

Pages · Widgets · Cubits (flutter_bloc) · go_router

Domain

Entities · Use cases · Repository interfaces · pure Dart, fpdart Either

Data

Repositories · Drift (SQLite) DAOs · Mappers · Sync outbox

Flutter

Dart 3

BLoC / Cubit

Drift · SQLite

Supabase

PostgreSQL + RLS

get_it + injectable

go_router

ML Kit

fl_chart

i18n / RTL

bloc_test · mocktail

ENGINEERING HIGHLIGHTS

Offline-first. Private by default.

Offline-first sync

A local DB is the source of truth. An outbox is written in the same transaction, with revision guards and manual conflict resolution for money records.

App lock

PIN hashed with PBKDF2, biometrics, auto-lock on inactivity and screenshot protection.

Honest money math

Integer minor units plus ISO 4217 currency. A missing exchange rate blocks the total instead of guessing it.

On-device ML

OCR runs locally with ML Kit, so images never leave the phone. AI keys stay in secure storage.

18

feature modules

3,000+

unit, widget & bloc tests

2

languages, RTL + LTR

TRY IT

Try Daftary on your phone.
